PROJECT ACCESS

# Opening Pathways to Learning

## Teaching Foundational Early Learning Skills through Connection, Motivation and Child Engagement

## WEBINAR

Foundational early learning skills, including joint attention, matching, and imitation, support children's ability to engage with others, learn from their environment, and participate in meaningful learning experiences. For learners with autism spectrum disorder (ASD) and other developmental disabilities, these skills may present unique challenges that impact participation and learning across early childhood and school settings. This webinar will explore practical, behavior-analytic strategies for teaching these skills by prioritizing individual student motivators, building on child interests, and creating opportunities for connection and engagement. Participants will also explore considerations for implementing these strategies within everyday routines, play, and classroom activities. Attendees will leave with concrete strategies they can begin using the very next day to support foundational learning and meaningful engagement.

*Date*
**Dec 7, 2026**

*Start At*
**9am-11:30am**

*Online*

## SPEAKERS

***Alexandra Beckman and Marissa Letterman have a wide breadth of knowledge and expertise. We have over 25 years combined experience working with populations with a diverse range of needs, and between the two of us have been Special Education teachers, Process Coordinator/Educational Diagnostician, District-Wide BCBA, and Clinical BCBA. Our mission is to provide personalized, evidence-based therapies that help individuals make significant progress in their quality of life. We believe in a future where individuals have access to tailored, effective ABA interventions that enable them to reach their fullest potential within our community.***
